I benefit from listening to XM Radio which I PAY for and expect the best services from them including my local traffic and weather with out waiting 10 minutes between reports. It only takes me 10 minutes to get to and from work. I expect commercial free music stations and other variety stations to have the choice to listen to. Instead of trying to control paid services which benefit us customers, why not enforce newer regulations to the local radio stations to improve their services or create an instant traffic/weather station on FM or AM that would be comparable to XM???

If the radio stations had more features like XM does then they wouldn't be so threatened.

I urge the FCC to REJECT THE NBA'S PETITION 04-160.

Thank you for your time and please if you haven't tried XM for your self to know how valuable these features are I would suggest you do before considering ending the services.

Regards,
Brenda Waldecker
